REPORT TO THE FISHING INDUSTRY ON THE RESULTS OF THE  
1994 EASTERN BERING SEA GROUNDFISH SURVEY

INTRODUCTION

The purpose of this report is to provide timely information to the U.S. fishing industry and other interested parties on catch rates and average lengths of commercially important groundfish sampled during a groundfish assessment survey conducted in the eastern Bering Sea in the summer of 1994. The survey was conducted by the Resource Assessment and Conservation Engineering (RACE) Division of the Alaska Fisheries Science Center (AFSC) during the period from June 1 to August 5.

This report briefly describes survey methods and contains figures illustrating the distribution, relative abundance, and size composition of commercially important species of groundfish. Species included are walleye pollock, Pacific cod, yellowfin sole, rock sole, flathead sole, Alaska plaice, arrowtooth flounder, and Greenland turbot. An appendix to the report presents detailed position and catch data for each station fished.

A similar report for species of crab has been prepared by personnel of the Kodiak Facility of the AFSC. Copies are available upon request.

METHODS

The survey area, which has been sampled annually since 1979, extends over a large part of the eastern Bering Sea continental shelf and encompasses a major portion of the distributions of commercially important groundfish species in the region (Fig. 1).

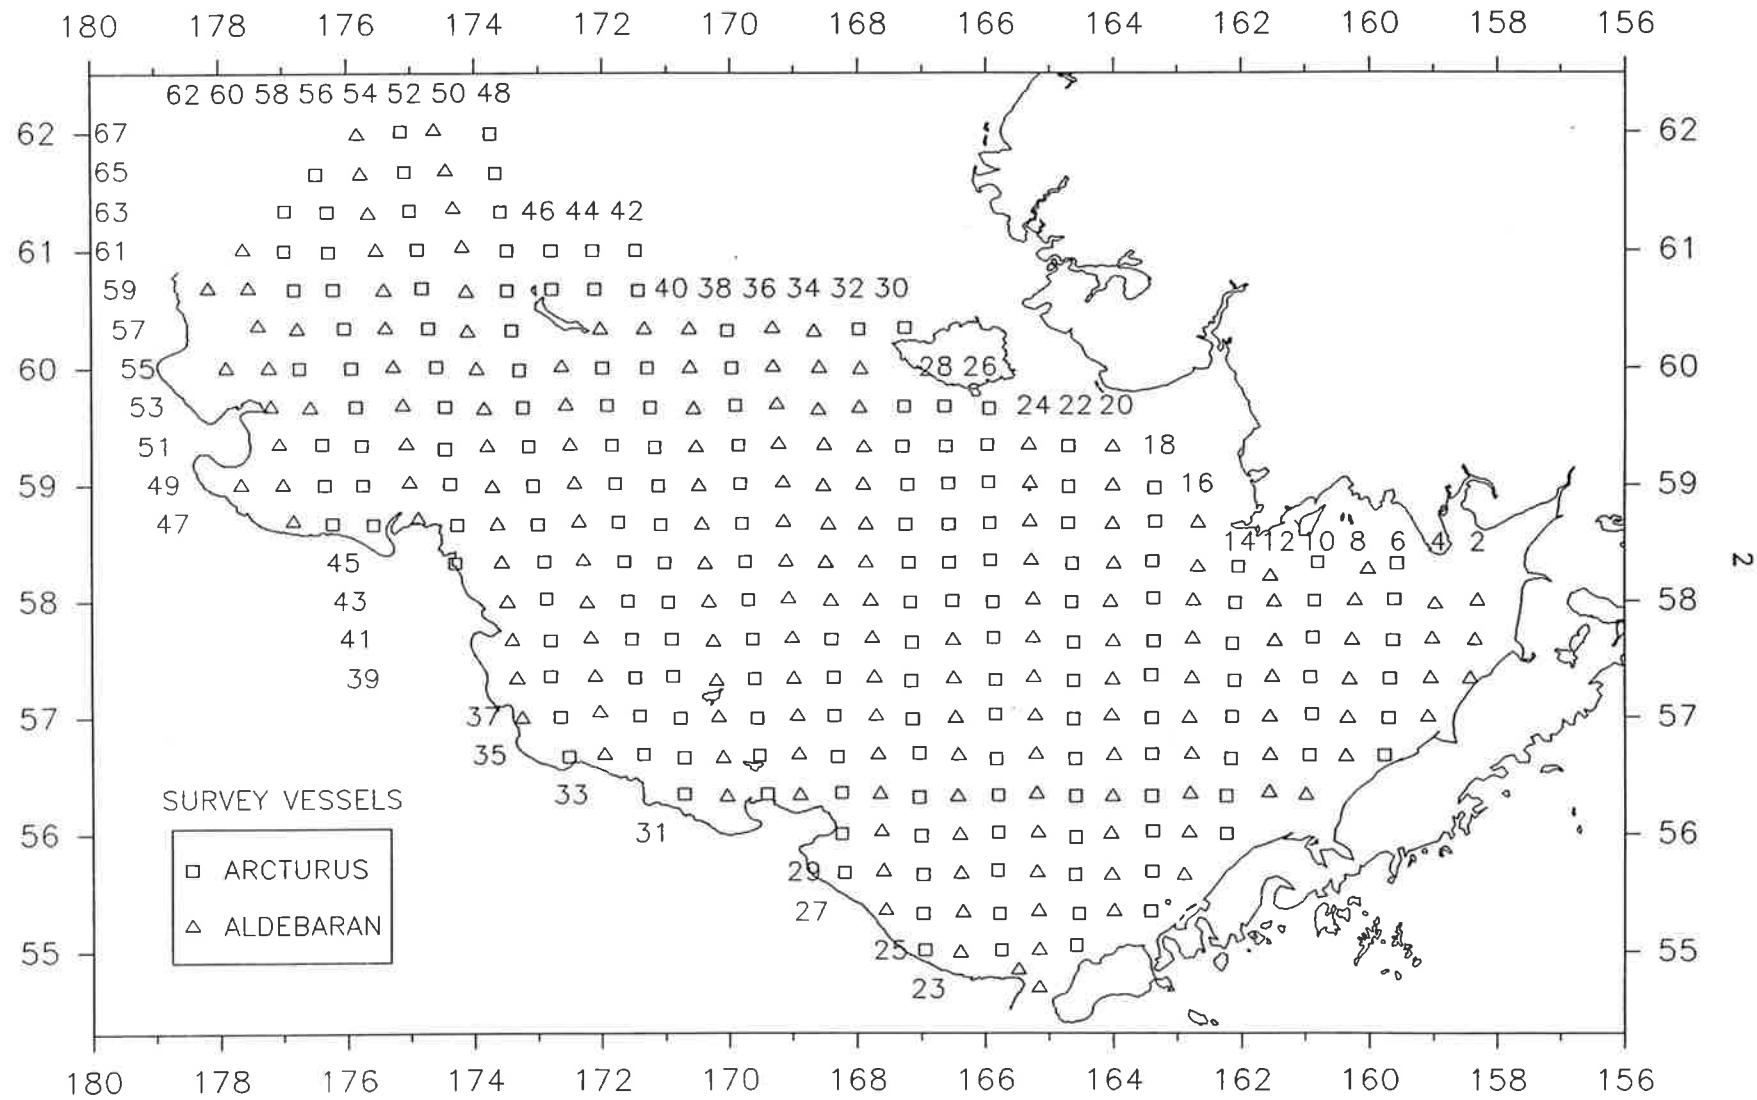

Figure 1.--Stations fished during the 1994 eastern Bering Sea summer groundfish survey.

The survey began in Bristol Bay and progressed westward to the edge of the continental shelf with the two survey vessels fishing alternate columns of stations.

Vessels involved were the chartered vessels F/V Aldebaran and the F/V Arcturus. Characteristics of these vessels are given below.

Table 1.--Vessels participating in the 1994 Bering Sea groundfish survey.

<u>Vessel</u>	<u>Overall length(ft)</u>	<u>Gross tonnage</u>	<u>Horsepower</u>	<u>Survey period Start</u>	<u>Finish</u>
<u>Aldebaran</u>	131	190	1,525	June 1	Aug 3
<u>Arcturus</u>	131	190	1,525	June 1	Aug 5

The 83-112 eastern trawl was the standard sampling gear for both vessels. The length of the footrope was 112 feet and the headrope 83 feet. The footrope is fished without roller gear. Mesh sizes were 4.0 inches in the wings and body and 3.5 inches in the intermediate and codend. The codend had a liner of 1.25-inch mesh. The trawl width (distance between the wings while fishing) and vertical opening were monitored throughout the survey by SCANMAR<sup>1</sup> net mensuration equipment. The vessels used steel V-doors which were 6 by 9 feet and double 30-fathom dandylines with 24-inch chain extensions between the lower

<sup>1</sup> Reference to trade names does not imply endorsement by the National Marine Fisheries Service, NOAA.

dandylines and the footrope.

Although tows were usually 30 minutes in duration, catch weights are reported in units of pounds per 1-hour of trawling as in previous issues of this report. Sampling density was one station per 400 square nautical miles. For the purposes of this report, only stations which were satisfactorily sampled and which were located near the center of the 400 square nautical mile grids were used. Total catches weighing less than approximately 2,500 pounds were placed directly onto a sorting table and sorted to individual species. Catches greater than 2,500 pounds were placed in a splitting bin, a portion of which was lined with a cargo net. A subsample was then taken with the cargo net and transferred from the bin to the sorting table. Every effort was made to obtain a subsample which was representative of the catch. After sorting the subsample, individual species were weighed and counted and these weights and numbers were expanded to the total catch. A random sample of up to 300 fish of commercially important species was set aside for length measurements.

Sea water temperature profiles were taken at most stations using either a micro-bathythermograph attached near the headrope of the net, or expendable bathythermograph probes released from the vessel; bottom temperatures are presented in Figure 18.

#### RESULTS

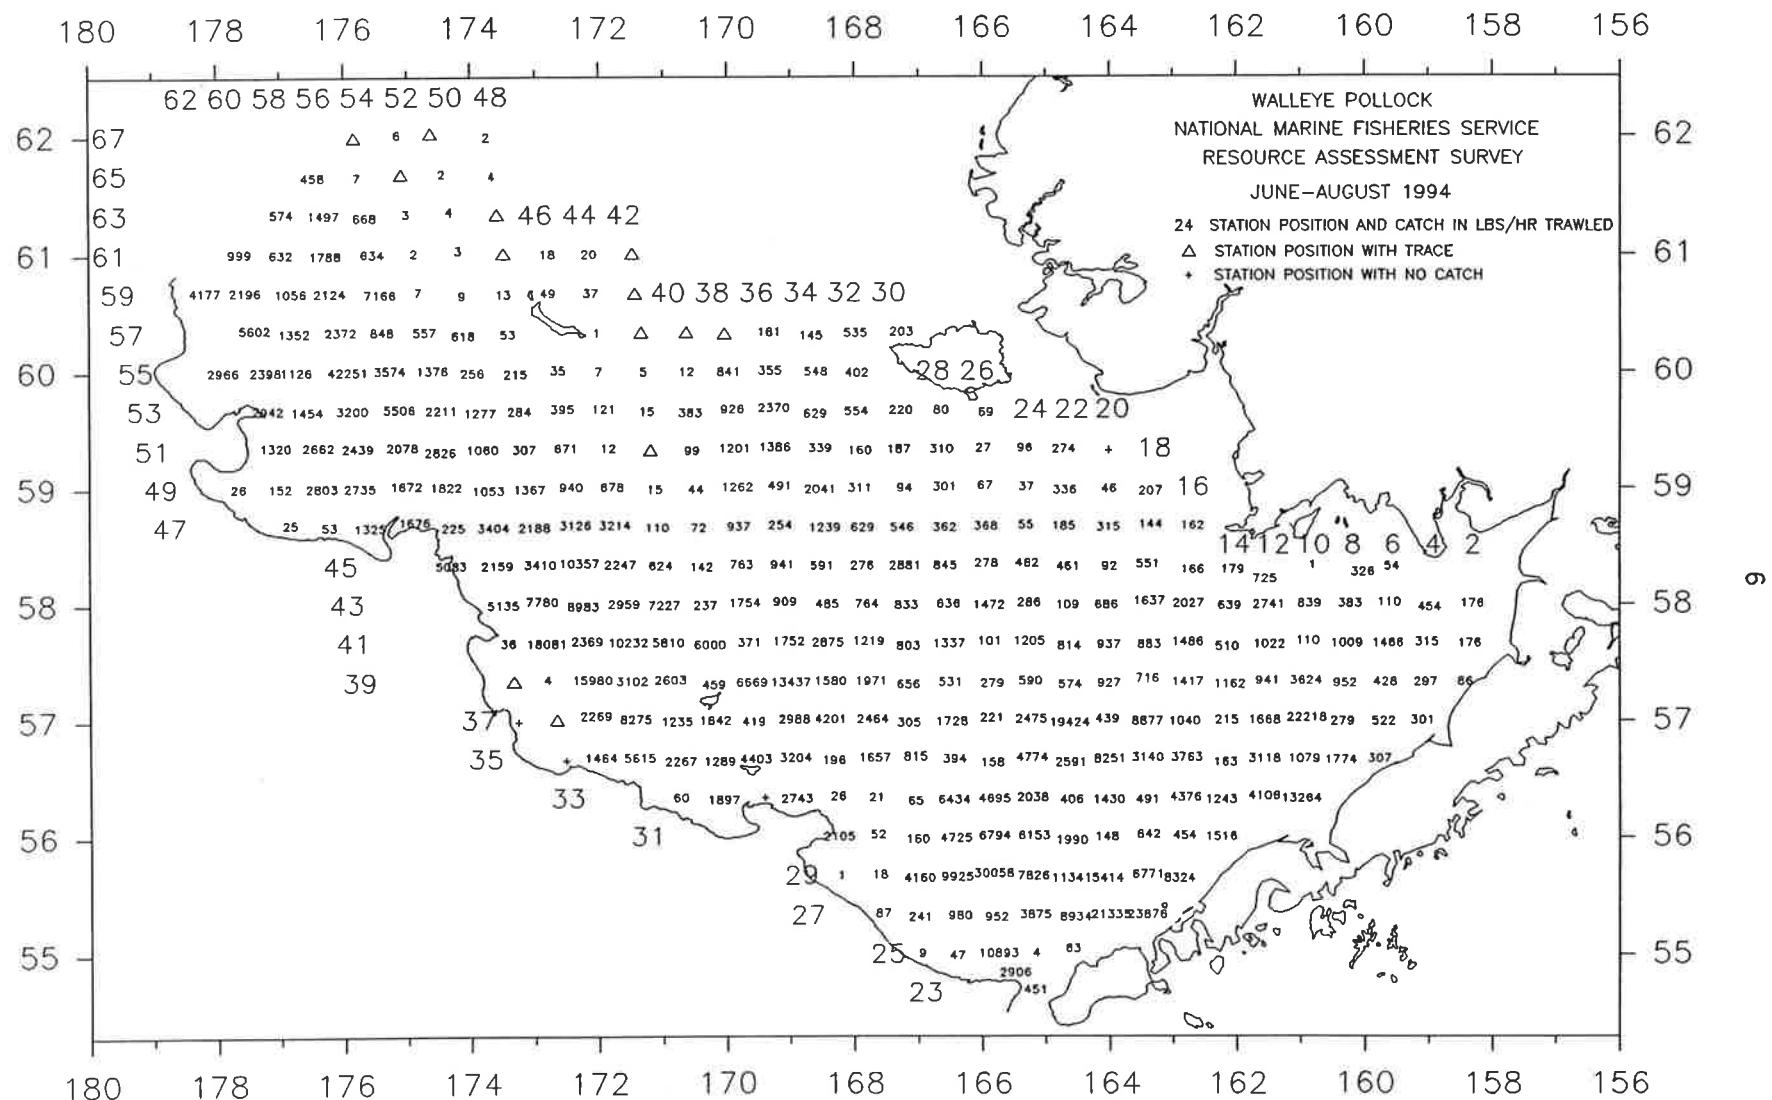

Catch rates in pounds per hour trawled for individual species of groundfish are shown in even-numbered figures 2-16 and

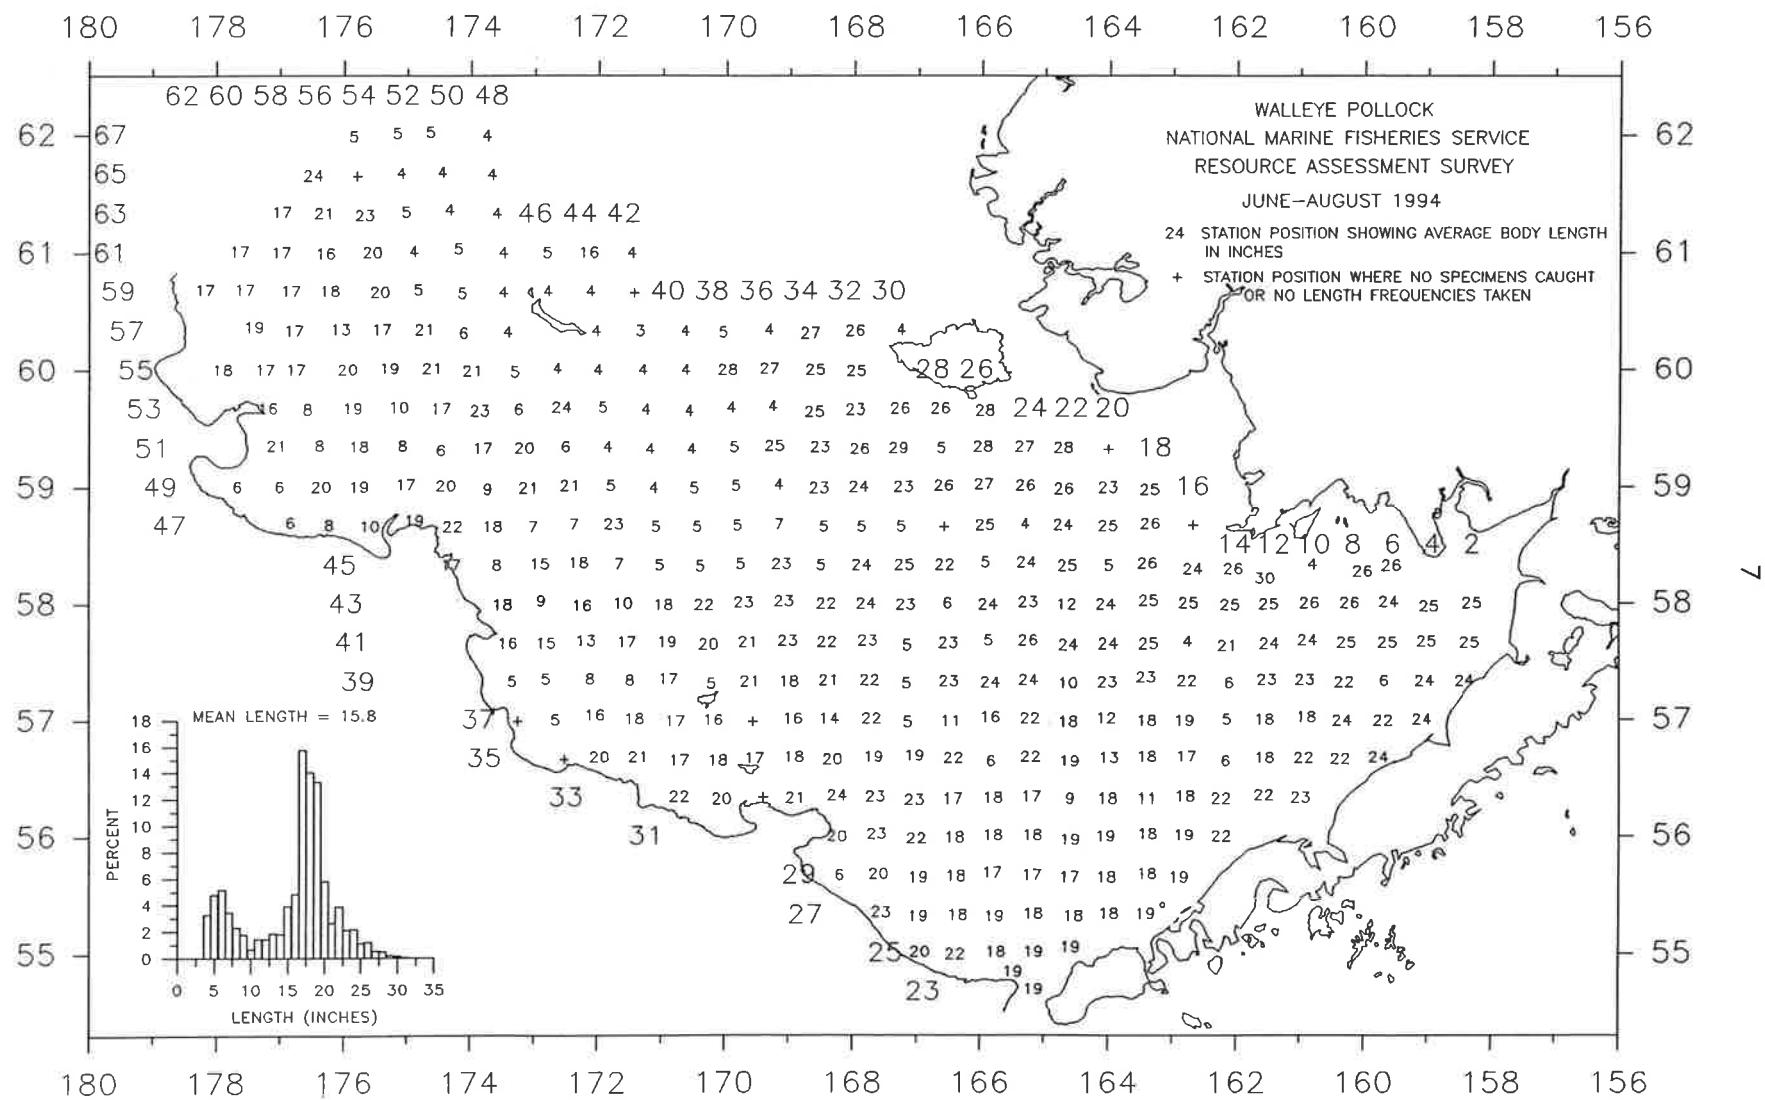

average lengths are presented in odd-numbered figures 3-17.

There were often fewer stations with average length data than catch data because small catches of some species were not measured.

The survey area covers a major portion of key species distributions in the eastern Bering Sea. An exception is Greenland turbot, as most of the adult population occupies continental slope waters (deeper than 100 fathoms) which were not surveyed in 1994. The catch rates and average lengths presented for this species, therefore, represent mainly the juvenile portion of the population. Information on the adults of this as well as other commercially important species of groundfish in continental slope waters is covered in a special report to industry (NWAFC Processed Report 88-11 entitled "Distribution of groundfish on the continental slope of the eastern Bering Sea as shown by U.S.-Japan cooperative surveys 1981-1985").

Stations in figures 1-18 are arranged in a grid of numbered rows and columns and may be identified accordingly. For example, the station located at the intersection of row 23 and column 24 is designated as 2324. These identification numbers are used to locate detailed position (latitude, longitude, and LORAN coordinates) and catch data (Appendix Tables 1 and 2). The stations are listed numerically beginning at the southwest corner of the survey area with row 23.

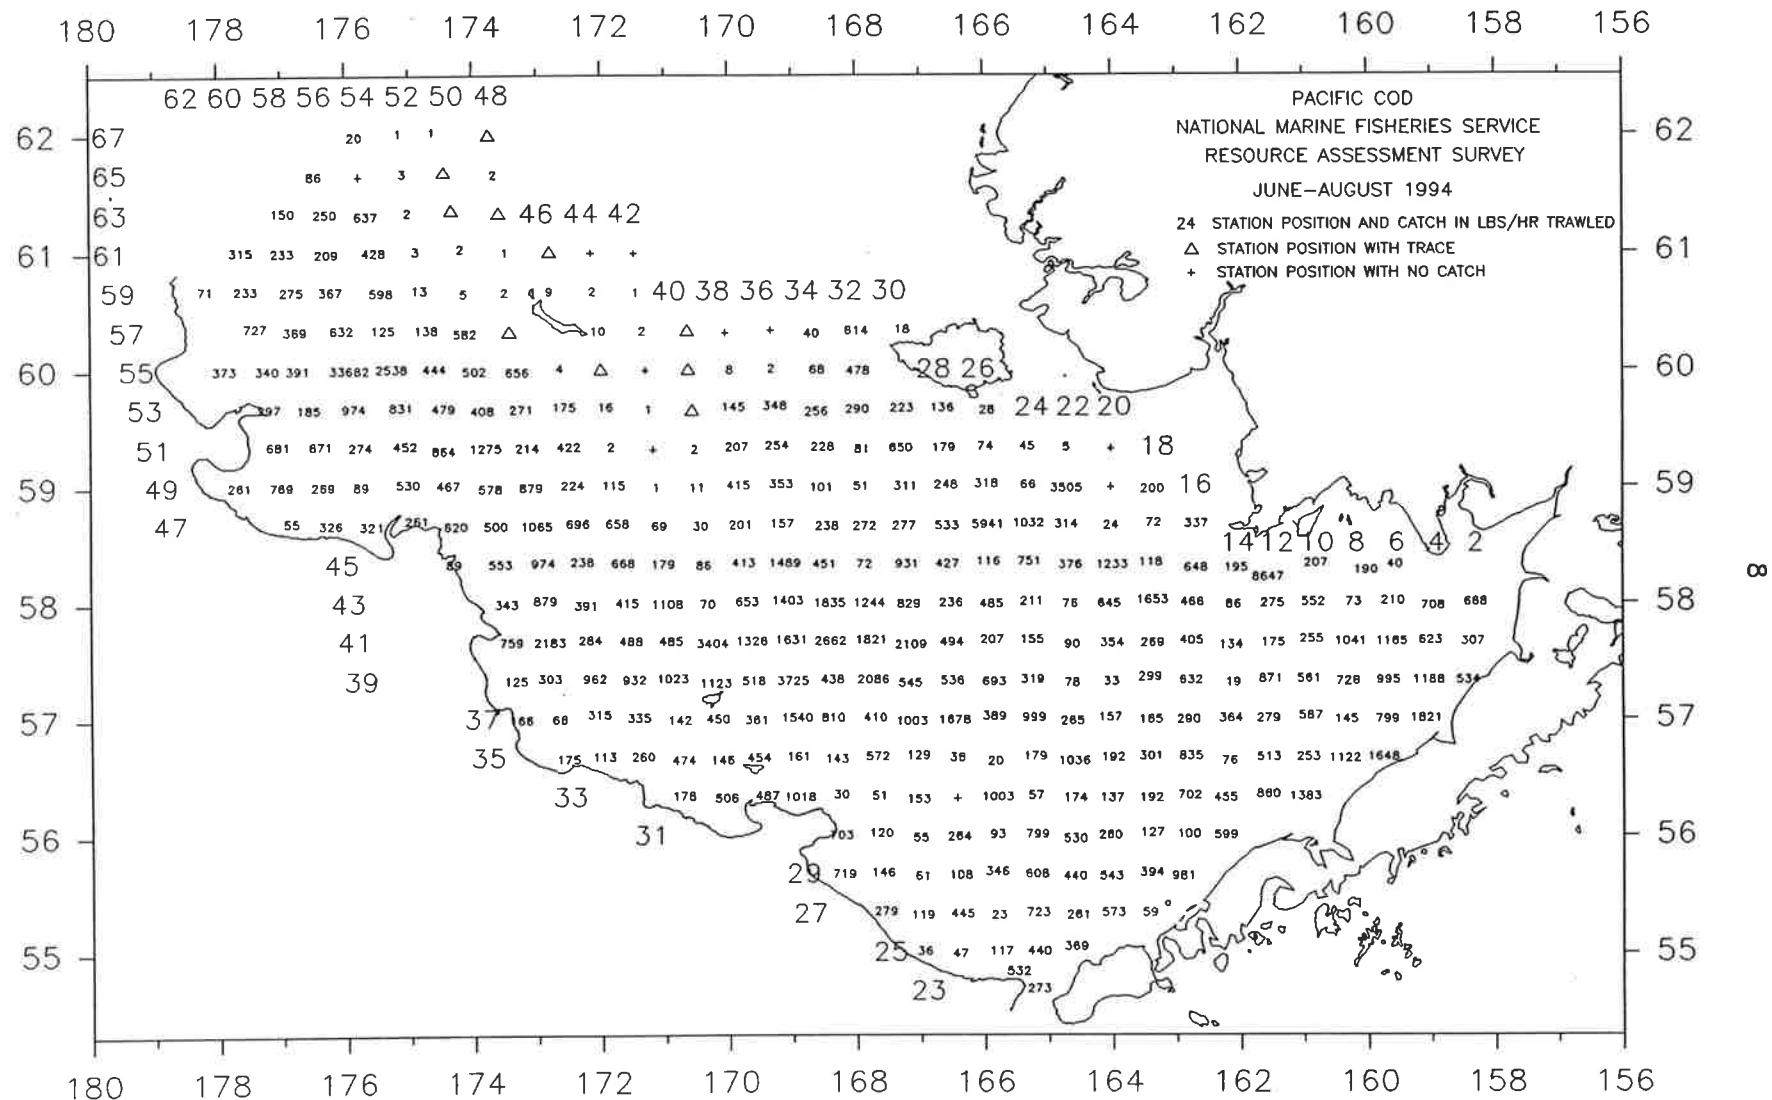

Figure 4.--Catches of Pacific cod (lb/hr) during the 1994 eastern Bering Sea summer groundfish survey.

## APPENDIX

## Station, haul, and catch data

Table 1.--Haul and catch data for successfully completed tows by the F/V Aldebaran.

Table 2.--Haul and catch data for successfully completed tows by the F/V Arcturus.

## Definitions

1. Missing digits in latitude and longitude coordinates always represent zero (0).
2. Performance code "0" represents a satisfactory tow; performance code "1" represents a satisfactory tow, although the trawl snagged bottom.
3. Gear code "44" refers to the 83-112 eastern trawl used by both vessels during the 1994 eastern Bering Sea crab-groundfish survey. The effective pathwidth of the trawl was continuously monitored by net mensuration instruments (refer to page 3).

## Units

1. Gear depths are in fathoms.
2. Distances are in nautical miles.
3. Catch weights are given in pounds.

Table 1.--Haul and catch data for successfully completed tows by the F/V Aldebaran.
