SYSTEMIC MANAGEMENT:
Sustainable Human Interactions with Ecosystems and the Biosphere
by
Charles W. Fowler
OXFORD UNIVERSITY PRESS (2009)

Chapter 1:	Pages
Appendix 1.1 - Reality/complexity	1-3
Appendix 1.2 - Species-level failure to thrive	4-7
Appendix 1.3 - Sample patterns for the eastern Bering Sea	8-10
Chapter 2:	
Appendix 2.1 - Variety in patterns among species	11-27
Chapter 3:	
Appendix 3.1 - Species characteristics and selectivity in extinction and speciation	28-40
Appendix 3.2 - Evolutionary contributions to the formation of species-level patterns	41-62
Appendix 3.3 - Selective evolution between two categories	63
Appendix 3.4 - Selective extinction, speciation and evolution for two categories	64-65
Appendix 3.5 - Selective extinction and speciation in numerous categories	66-68
Appendix 3.6 - Alternative terms for the processes of selective extinction and speciation	69-72
Chapter 4:	
Appendix 4.1 - What should management applied to ecosystems include?	73-82
Appendix 4.2 - Ecosystem changes	83-88
Appendix 4.3 - Principles of "ecosystem management"	89-91
Appendix 4.4 - The Bayesian interpretation of selective extinction and speciation	92-95
Chapter 5:	
Appendix 5.1 - Science is inadequate for management	96-98
Appendix 5.2 - Asking management and research questions	99-104
Chapter 6:	
Appendix 6.1 - Identifying human elements in needed management	105-112
Appendix 6.2 - Overpopulation as contributing cause to environmental degradation	113-117
Appendix 6.3 - Conventional assessment of human population size	118-124
Appendix 6.4 - The human population evaluated by interspecific comparisons	125-129
Appendix 6.5 - The challenge of population at the national level	130-131
Appendix 6.6 - Human contribution to extinction	132-135
